

HAZARD BART TRAFFIC SPEED BUMP (PRODUCT CODE: BART/500 RANGE)

KEY FEATURES – Heavy-Duty – Long Life – Slow Down Traffic Safely

BART Traffic Ramps offer the best package for slowing down traffic safely, reducing the risk of accidents on your site. Off-highway sites do not usually have segregated walkways for pedestrians, therefore HSE recommend that safe speed limits of 5 – 15 mph are clearly signed and where possible enforced. As manufacturers we give you the best quality rubber with the longest working life at the lowest cost.

BART Traffic Speed Bumps are the toughest all EPDM rubber speed bumps in the market place and can take all types of traffic. The heavily ribbed surface gives drivers maximum visual impact and warning. **Bart Traffic Speed Bumps can be installed with confidence in any location.**

Also available in the Hazard “cut to length” extruded rubber range of speed bumps:

SR10 – Speed Limit 5-10 mph: Create a safer working environment by firmly controlling traffic speeds. Maximum deterrent, reducing the risk of accidents where there is a high-density mix of pedestrians and traffic.

SR15 – Speed Limit 10-15 mph: Allow vehicles to pass smoothly over the ramp at speeds under 15 mph. Manufactured in solid tyre stock rubber to take all types and weights of vehicles from Smart cards to HGVs.

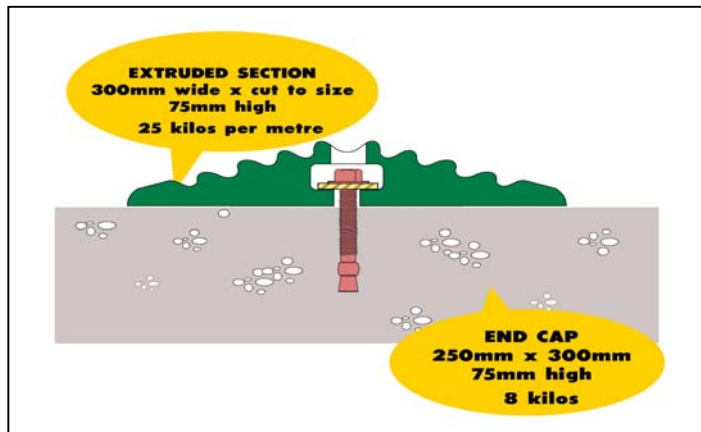

SR20 – Speed Limit 20 mph: For sites where the public have a right of access, these ramps will keep speeds down to a safe level. This height of ramp allows drivers to pass over at 20 mph.

It is recommended that a DfT reflective caution sign is used alongside BART Traffic Ramps to provide a clear warning to drivers 24/7 in all weather and day and night.

SPECIFICATION

- Choice of bolt down fixings:
 a) Fitted ground plate(s)
 b) Pre-drilled top fixings, see right

Design Life 10 – 15 years
 Solid rubber takes all types of traffic
 Excellent resistance to salt and ozone
 Temperature range –30c to 60c
 Self-coloured rubber UV stable
 Hardness 70 to 75 shore
 Heavy-duty construction

| Colour Options | Size Options |
|-----------------|--|
| Black | 75mm high: 5 to 10mph |
| Yellow end caps | 60mm high: 10 to 15mph |
| | 55mm high: 20mph |
| | BART speed bumps are cut to any length to suit your site layout & conditions |

FREQUENTLY ASKED QUESTIONS

How long will the BART Traffic Speed Bumps last?

Manufactured in quality tyre compound, traffic volumes may vary from site to site but our ramps have been proven to give over 15 years of service.

What are the correct warning signs?

It is important to clearly show the speed limit for the site. The signs should be as the UK's highway code DfT, printed on reflective sign face material.

How tough are BART rubber Speed Bumps?

Very. We recommend this version of our speed bumps for those heavy duty installations such as waste transfer stations etc.

Are these Speed Bumps the same as used by councils in urban areas?

No. This range of speed ramps are designed for “off highway” use only. Our Smart speed bump range, extra wide (1 metre) are similar to DfT design.
